Hot rolled products of structural steels —

Part 6: Technical delivery conditions for flat products of high yield strength structural steels in the quenched and tempered condition
National foreword

This British Standard is the UK implementation of EN 10025-6:2004+A1:2009. It supersedes BS EN 10025-6:2004, which is withdrawn.

The start and finish of the text introduced or altered by amendment is indicated in the text by tags. Tags indicating changes to CEN text carry the number of the CEN amendment. For example, text altered by CEN amendment A1 is indicated by [A1] [A1].

The UK participation in its preparation was entrusted to Technical Committee ISE/12, Structural steels.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.

Hot rolled products of structural steels - Part 6: Technical delivery conditions for flat products of high yield strength structural steels in the quenched and tempered condition

This European Standard was approved by CEN on 1 April 2004 and includes Amendment 1 approved by CEN on 17 April 2009.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.
The page contains a table of contents for a technical specification, presumably for steel or a similar material. The table lists various sections with page numbers indicating where each section starts. The sections include:

- **Foreword** (Page 4)
- **Scope** (Page 5)
- **Normative references** (Page 5): Includes sub-sections 2.1 General standards and 2.2 Standards on dimensions and tolerances (see 7.7.1)
- **Terms and definitions** (Page 6)
- **Classification and designation** (Page 6)
- **Information to be supplied by the purchaser** (Page 7)
- **Manufacturing process** (Page 8)
- **Requirements** (Page 8)
- **Inspection** (Page 11)
- **Preparation of samples and test pieces** (Page 12)

Each section is followed by sub-sections, and there are references to standards and processes involved in the material's preparation and testing.
Foreword

This document (EN 10025-6:2004+A1:2009) has been prepared by Technical Committee ECISS/TC 10 “Structural steels - Grades and qualities”, the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by November 2009, and conflicting national standards shall be withdrawn at the latest by November 2009.

This document includes Amendment 1, approved by CEN on 2009-04-17.

This document supersedes EN 10025-6:2004.

The start and finish of text introduced or altered by amendment is indicated in the text by tags.

deleted text

The titles of the other parts of this document are:

Part 1: General technical delivery conditions;

Part 2: Technical delivery conditions for non-alloy structural steels;

Part 3: Technical delivery conditions for normalized/normalized rolled weldable fine grain structural steels;

Part 4: Technical delivery conditions for thermomechanical rolled weldable fine grain structural steels;

Part 5: Technical delivery conditions for structural steels with improved atmospheric corrosion resistance.

This document has been prepared under Mandate M/120 given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of the EU Construction Products Directive (89/106/EEC). For relationship with the EU Construction Products Directive, see informative Annex ZA of EN 10025-1:2004.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.
1 Scope

Part 6 of this document, in addition to part 1, specifies requirements for flat products of high yield strength alloy special steels. The grades and qualities are given in Tables 2 to 4 (chemical composition) and Tables 5 to 7 (mechanical properties) and are supplied in the quenched and tempered condition as given in 6.3.

The steels specified in this document are applicable to hot-rolled flat products with a minimum nominal thickness of 3 mm and a maximum nominal thickness \( \leq 150 \) mm for grades S460, S500, S550, S620 and S690, a maximum nominal thickness \( \leq 100 \) mm for grade S890 and a maximum nominal thickness \( \leq 50 \) mm for grade S960, in steels which, after quenching and tempering, have a specified minimum yield strength of 460 MPa\(^1\) to 960 MPa\(^1\).

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

2.1 General standards

EN 10020, Definition and classification of grades of steel.

EN 10027-1, Designation systems for steels — Part 1: Steel names, principal symbols.

EN 10027-2, Designation systems for steels — Part 2: Numerical system.

EN 10163-1, Delivery requirements for surface condition of hot-rolled steel plates, wide flats and sections — Part 1: General requirements.

EN 10163-2, Delivery requirements for surface condition of hot-rolled steel plates, wide flats and sections — Part 2: Plates and wide flats.

EN 10164, Steel products with improved deformation properties perpendicular to the surface of the product — Technical delivery conditions.

\(^1\) 1 MPa = 1 N/mm\(^2\).
