Medical vehicles and their equipment — Air ambulances
Part 2: Operational and technical requirements for air ambulances
National foreword

This British Standard is the UK implementation of EN 13718-2:2015. It supersedes BS EN 13718-2:2008 which is withdrawn.

The UK committee recognizes the importance of EN 13718 in setting out minimum standards for the safe and efficient operations of air ambulances within the UK. However, the UK committee has identified concerns that in its current form the provisions in this European Standard for such aircraft are broad but do not fully account for the range of existing aircraft in use in the UK.

The same concerns extend to the requirements for specific medical devices, products and equipment on board different types of air ambulance due to the need for trained and licensed personnel to administer/use them.

The UK committee is taking steps to initiate a revision of this standard within CEN. For further information, the AAA's Operational Subcommittee Chairman can be contacted at:

Operations Subcommittee Chairman
Association of Air Ambulances
50 High Street
Henley-in-Arden
Warwickshire
B95 5AN

The UK participation in its preparation was entrusted to Technical Committee CH/239, Rescue systems.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Foreword

This document (EN 13718-2:2015) has been prepared by Technical Committee CEN/TC 239 “Rescue systems”, the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by September 2015, and conflicting national standards shall be withdrawn at the latest by September 2015.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN 13718-2:2008.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s).

For relationship with EU Directive(s), see informative Annex ZA which is an integral part of this document.

EN 13718-2:2008 has been technically revised. The following points represent the most important changes in the revision:

a) clarified unclear issues in this part of the standard and between the two parts of the standard (for example requirements for patient's compartment illumination);

b) changed text related to enhancing safety related to the risk from rotors on helicopters;

c) clarified the requirements for the patient compartment;

d) the standard has been modified/integrated to meet the Medical Devices Directive 93/42/EEC requirements.

EN 13718 consists of the following parts, under the general title: Medical vehicles and their equipment – Air ambulance:

— Part 1: Requirements for medical devices used in air ambulances;

— Part 2: Operational and technical requirements for air ambulances.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.
Introduction

This part of EN 13718 provides requirements for air ambulances, and in particular covers requirements for the ambulance role of the aircraft.

Air ambulances are equipped with medical devices as well as drugs and rescue equipment to be used by medical personnel. Requirements for medical devices intended for use in air ambulances are provided in EN 13718-1. This standard is supplementary to several European Standards as well as laws and regulations providing the requirements for aircraft in order to provide continuous patient care and monitoring during transport in and between various ambulance types and hospitals. The requirements cover ambulance flights in general. Several national and regional rules and regulations apply to aircraft being used as ambulances. This part of EN 13718 gives information on these in the annexes and in notes throughout the text. Provisions for the safety and care both of the patient as well as of the crew and the medical personnel are contained in existing national and international laws, regulations and guidelines.

This part of EN 13718 provides some general requirements for the safe operation of aircraft being used as ambulances. These requirements are not covered by the scope of the Medical Devices Directive or by international agreements for craft, transportation and traffic. They are provided in order to secure the safe and secure handling of patients. In order to accommodate continuity of patient care between different kinds of ambulances, some specific requirements are given. Requirements are set in order to secure safe use and handling of medical devices.

Aircraft being used as ambulances are equipped with medical devices, medicinal products and rescue equipment to enable the medical personnel to provide continuous patient care. The minima for the medical devices are specified in Annex A. The requirements set out in this part of EN 13718 give the minimum provisions for an ambulance service to provide satisfactory care and medical attention to emergency patients as well as other patients during transportation. The requirements are based on the state of the art of today and common practice in Europe.

This European Standard gives minimum requirements for interfaces and compatibility of medical devices used in air ambulances. The standards work was called for by the EU Commission by a mandate linked with the Medical Devices Directive (see Annex ZA and Bibliography [1]).

This European Standard is supplementary to several other European Standards and gives requirements for medical devices when used in situations where the ambient conditions differ from the normal indoor conditions prevailing within the health care system. Several specific requirements are related to the conditions prevailing in air ambulances. The requirements set are carefully selected to ensure interoperability and continuous patient care.

Medical devices need to conform to the applicable essential requirements in the Medical Devices Directive, 93/42/EEC. The essential requirements are listed in Annex I of the Medical Devices Directive. Annex ZA in this European Standard lists the essential requirements that are covered by the identified clauses of this European Standard.

The environmental conditions for medical devices used in air ambulances are different from those expected in a normal hospital environment. In particular, this implies environmental conditions such as temperature and humidity, vibration and shock caused by movement of the air ambulances, variable atmospheric pressures and electromagnetic disturbances between the air ambulances and the medical device.
1 Scope

This part of EN 13718 specifies the requirements for performance and equipping for air ambulances, including requirements for interfaces to medical devices used for the transport and treatment of sick or injured persons. This part of EN 13718 is applicable to air ambulances capable of transporting at least one person on a stretcher.

NOTE Requirements are specified for categories of air ambulances based on the different intended use. These are the helicopter emergency medical service (HEMS) the helicopter intensive care medical service (HICAMS) and the fixed wing air ambulance (FWAA).
