American National Standard

Designation of this document as an American National Standard attests that the principles of openness and due process have been followed in the approval procedure and that a consensus of those directly and materially affected by the standard has been achieved.

This standard was developed under the procedures of the Standards Committee of the American Nuclear Society; these procedures are accredited by the American National Standards Institute, Inc., as meeting the criteria for American National Standards. The consensus committee that approved the standard was balanced to ensure that competent, concerned, and varied interests have had an opportunity to participate.

An American National Standard is intended to aid industry, consumers, governmental agencies, and general interest groups. Its use is entirely voluntary. The existence of an American National Standard, in and of itself, does not preclude anyone from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standard.

By publication of this standard, the American Nuclear Society does not insure anyone utilizing the standard against liability allegedly arising from or after its use. The content of this standard reflects acceptable practice at the time of its approval and publication. Changes, if any, occurring through developments in the state of the art, may be considered at the time that the standard is subjected to periodic review. It may be reaffirmed, revised, or withdrawn at any time in accordance with established procedures. Users of this standard are cautioned to determine the validity of copies in their possession and to establish that they are of the latest issue.

The American Nuclear Society accepts no responsibility for interpretations of this standard made by any individual or by any ad hoc group of individuals. Inquiries about requirements, recommendations, and/or permissive statements (i.e., “shall,” “should,” and “may,” respectively) should be sent to the Society Headquarters, ATTN: Standards or to standards@ans.org. Action will be taken to provide appropriate response in accordance with established procedures that ensure consensus.

Comments on this standard are encouraged and should be sent to Society Headquarters.

Inquiry Requests

The American Nuclear Society (ANS) Standards Committee will provide responses to inquiries about requirements, recommendations, and/or permissive statements (i.e., “shall,” “should,” and “may,” respectively) in American National Standards that are developed and approved by ANS. Responses to inquiries will be provided according to the Policy Manual for the ANS Standards Committee. Nonrelevant inquiries or those concerning unrelated subjects will be returned with appropriate explanation. ANS does not develop case interpretations of requirements in a standard that are applicable to a specific design, operation, facility, or other unique situation only and therefore is not intended for generic application.

Responses to inquiries on standards are published in ANS’s magazine, Nuclear News, and are available publicly at www.ans.org or by contacting standards@ans.org.

Inquiry Format

Inquiry requests shall include the following:

1. the name, company name if applicable, mailing address, and telephone number of the inquirer;
2. reference to the applicable standard edition, section, paragraph, figure, and/or table;
3. the purpose(s) of the inquiry;
4. the inquiry stated in a clear, concise manner;
5. a proposed reply, if the inquirer is in a position to offer one.

Inquiries should be addressed to

or standards@ans.org
Foreword

(This foreword does not contain any requirements of American National Standard “Reload Startup Physics Tests for Pressurized Water Reactors,” ANSI/ANS-19.6.1-2019, but is included for informational purposes.)

The intent of this American National Standard is to provide guidance for verifying the nuclear characteristics of a commercial pressurized water reactor core. This standard is intended to cover the physics tests that are performed following a refueling or other alteration of the reactor core for which nuclear design calculations are required. This standard provides the minimum acceptable startup physics test program; however, this standard recognizes that additional tests may be required by special design features for a particular core. This standard does not reflect all test programs that have been approved by the U.S. Nuclear Regulatory Commission. This standard specifies the minimum testing required to confirm that the reconstructed core is accurately represented by the design/analysis.

Compliance with the intent of this standard can be demonstrated by meeting the following requirements:

1. Confirm the physics characteristics described herein using an acceptable method;
2. Determine if the test results agree with the predicted results within the previously established test criterion;
3. Document the above in accordance with the requirements of Sec. 7 of this standard.

Suggestions for the improvement of this standard are welcome. They should be sent to the American Nuclear Society, ATTN: Standards, 555 North Kensington Avenue, La Grange Park, Illinois 60526, or to standards@ans.org.

Following is a summary of changes that were made to the previous version, ANS-19.6.1-2011 (R2016):

1. Discussion of the difference between review criteria and acceptance criteria was moved from the appendix to the body of the standard with a clear statement that the standard uses only review criteria.
2. A new section (Sec. 5.3) was added to clarify that testing at the next power plateau should proceed only after acceptable results are obtained at the current power plateau.
3. A footnote was added to Table A.1 to address cores designed to be asymmetric.
4. Several editing changes were made.

This standard does not incorporate the concepts of generating risk-informed insights, performance-based requirements, or a graded approach to quality assurance. The user is advised that one or more of these techniques could enhance the application of this standard.

This standard might reference documents and other standards that have been superseded or withdrawn at the time the standard is applied. A statement has been included in the references section that provides guidance on the use of references.

This standard was developed by the ANS-19.6.1 Working Group of the American Nuclear Society, which had the active participation of the following members in preparing the current version:

C. T. Rombough (Chair), CTR Technical Services, Inc.
P. D. Adam, Wolf Creek Nuclear Operating Corporation
K. Banerjee, Oak Ridge National Laboratory
The Reactor Physics Subcommittee had the following membership at the time of its approval of this standard:

D. M. Cokinos (Chair), Brookhaven National Laboratory  
C. T. Rombough (Secretary), CTR Technical Services, Inc.

The Safety and Radiological Analysis Consensus Committee had the following membership at the time of its approval of this standard:

A. O. Smetana (Chair), Savannah River National Laboratory  
J. M. Jarvis (Vice Chair), Bechtel Corporation
